

ReproMAX Enterprise Solutions

A new organizational model structured specifically for nationwide and international clients, ReproMAX Enterprise Solutions can provide best-of-class services tailored to meet the demands of companies who require highly efficient and seamless integration of both construction data distribution and specialized print services through a single point of contact.

By offering an automated and seamless interface, ReproMAX Enterprise Solutions can significantly decrease print costs while maximizing the efficiencies of data control. Leveraging a powerful partnership with McGraw Hill, ReproMAX Enterprise Solutions offers a simple yet highly sophisticated solution for project data distribution, allowing clients to transfer all project documents including plans, specs, addenda, and submittals with a single click of the mouse, providing all members of the project team with organized up-to-date information.

Recognizing that any truly 'global solution' will always require reliable local support, ReproMAX Enterprise Solutions has developed an organizational model which maximizes the advantages of centralized controls AND quality through local relationships between project team members and ReproMAX affiliates. While others focus on development of marketing programs emphasizing their being a 'single entity' provider, ReproMAX Enterprise Solutions has developed its program based on standards, credentialing, and rock solid relationships with local providers. To accomplish this, ReproMAX Enterprise Solutions requires an enhanced level of operational capability for printers who wish to participate in programs supporting national and international organizations.

By introducing a "hub and spoke" concept to the distribution process, project team members are assured that no matter where in the world the documents are to be distributed, a solution exists through ReproMAX Enterprise Solutions.
